Lisbon, Portugal · open to remote (EU, UK, US-friendly time zones)

PROFESSIONAL SUMMARY

QA Engineer with 4+ years in web, mobile (iOS/Android), and API testing. Commercial experience building and maintaining UI/API autotests with Playwright (TypeScript) and Node.js backend tests. GitLab CI integration, triaging failures, and keeping automated runs reliable in a regular release cadence.

Hands-on senior-level ownership as the only QA on the product: test strategy, plans, QA metrics, and documentation (TestRail, YouTrack). Strong manual coverage for mobile and API (Postman, Charles Proxy), SQL validation on data migrations.

Track record in healthtech, beautytech, and e-commerce: fewer post-release defects, ~40% faster regression through automation, clear collaboration with engineering.

CORE SKILLS

Test automation: Playwright (TypeScript), Node.js, UI/E2E and API autotests, Git, GitLab CI, pipeline integration, run triage, maintaining suites across releases

Manual QA: functional, regression, smoke, exploratory; web and mobile (iOS/Android); test design; test plans, checklists, test cases, bug reports

API & data: REST API, Postman, Swagger, Charles Proxy; SQL (PostgreSQL)

Tools & process: Jira, ClickUp, YouTrack, TestRail, Confluence, BrowserStack, DevTools, Figma, TestFlight

Also: Python, PyTest; AI-assisted testing (Cursor, ChatGPT) for test design and log analysis

PROFESSIONAL EXPERIENCE

QA Engineer · White Rainbow (dental clinic network) · May 2023 – Present · Sole QA · Remote

Test automation

- Develop and maintain UI/E2E autotests (Playwright, TypeScript) and API/backend autotests (Node.js) for business-critical flows
- Built and evolve the test framework: repo structure, reusable components, E2E regression suite
- Integrated autotests into GitLab CI — automated runs on push/MR as part of the release process
- Triage failing runs with developers; keep autotests up to date and stable across releases
- Cut regression testing time by ~40% by automating high-risk checks

Manual QA & quality process

- Established QA from scratch: strategy, plans, metrics, and documentation
- Functional and regression testing of the mobile app (iOS/Android)
- Supported React migration: API integrations, UI vs. Figma, SQL checks during data migration
- Maintained 1000+ test cases and docs after major architecture changes
- Partner with engineering, analytics, and support through the release cycle

Key results:

- Near-zero post-release defects for 3 consecutive releases (QA metrics + CI autotests)
- ~10% team efficiency gain from up-to-date test documentation
- Full regression coverage and QA process built from zero on a live product

QA Engineer · For You (Beauty App, startup) · Nov 2022 – Sep 2023 · Remote

- End-to-end manual QA for iOS/Android: real devices, emulators, TestFlight
- API testing (Postman) and traffic analysis (Charles Proxy)
- Test plans, checklists, and cases; defects in Jira and ClickUp
- Release regression and sign-off; coordinated with engineering before user impact

Key results:

- 4.7 average app rating on App Store and Google Play through release quality and documentation
- Fewer production defects as the test suite matured

QA Engineer · Conversion Advocates (A/B testing, e-commerce) · Jul 2021 – Nov 2022 · Remote

- Manual testing in BrowserStack; defect tracking in Jira
- API testing (Postman, REST); root-cause analysis with DevTools
- Test design techniques; task management in ClickUp
- Cross-functional work with developers, analysts, and designers

Key results:

- 3% fewer production defects and 5% fewer negative client escalations (checklists and test cases)

CAREER HIGHLIGHTS

- GitLab CI autotests run critical checks before every production release
- Near-zero critical production defects after QA metrics and automation
- 1000+ updated test assets → ~10% team efficiency improvement
- 4.7 mobile store rating (For You) — strong release discipline and QA ownership

EDUCATION

St. Petersburg Mining University — Engineering

Certifications & courses: ProductStar — Test Automation (2022–2023) · QA Tester Professional (2021) · Netology — HTML/CSS (2021)

Languages: English — professional working proficiency (documentation, async comms, calls) · Russian — native
